

Amendment to the Claims

Please replace all prior versions of the claims with the listing of claims included herewith:

1. (Currently amended) A URL resolution system for resolving Universal Resource Locators (URLs), the URL resolution system comprising:

a website crawler ~~for crawling~~ operative to: crawl a website comprising one or more webpages, ~~locating script code and selecting~~ and locate and select script code that possesses one or more specific portions which are used by web browsers to dynamically create one or more script URLs; and

a script URL resolution component ~~for loading~~ operative to load said one or more webpages, ~~causing examination of~~ examine said one or more specific portions of the script code selected during the crawling which are used by web browsers to dynamically create one or more script URLs, ~~and causing execution of~~ execute said one or more selected portions of the script code to obtain said one or more script URLs, and resolve the script URLs based on the execution.

2. (Previously Presented) The URL resolution system as claimed in claim 1 wherein the website crawler crawls individual web pages associated with a websites, and has a crawling controller for controlling the website crawler.

3. (Previously Presented) The URL resolution system as claimed in claim 2 wherein the website crawler has a script code detector for determining if a web page uses script code to dynamically create one or more script URLs.

4. (Previously Presented) The URL resolution system as claimed in claim 3 wherein the script code detector has a notification generating function for generating a notification when

the script code detector locates a web page that uses script code to dynamically create one or more script URLs.

5. (Original) The URL resolution system as claimed in claim 2 wherein the crawling controller receives results of script code examination from the script URL resolution component, and controls the website crawler based on the examination results.

6. (Original) The URL resolution system as claimed in claim 5 wherein the examination results include the script URL when the script code examination is successful, and the crawling controller controls the web crawler to crawl a web page identified by the script URL.

7. (Original) The URL resolution system as claimed in claim 6 wherein the crawling controller controls the website crawler to crawl multiple web pages in parallel.

8. (Original) The URL resolution system as claimed in claim 6 wherein the crawling controller controls the website crawler to crawl the web page identified by the script URL immediately.

9. (Original) The URL resolution system as claimed in claim 6 wherein the crawling controller controls the website crawler to queue the web page identified by the script URL for crawling at a later time.

10. (Cancelled)

11. (Currently Amended) The URL resolution system as claimed in claim 1 wherein the script URL resolution component comprises:

a web page loading controller ~~for instructing~~ operative to instruct a web page examiner to load the web page located by the website crawler; and

a script code execution controller ~~for instructing~~ operative to instruct the web page examiner to execute said specific portions of the script code used in the loaded web page to obtain said one or more script URLs.

12. (Previously Presented) The URL resolution system as claimed in claim 11 wherein the URL resolution system includes the web page examiner.

13. (Previously Presented) The URL resolution system as claimed in claim 11 wherein the script code execution controller uses an execution function of the web page examiner to execute the specific part of the script code.

14. (Previously Presented) The URL resolution system as claimed in claim 4 wherein the script code detector generates a notification when it locates a web page that uses one or more specific portions of script code to dynamically create one or more script URLs; and

the web page loading controller controls loading of the located web page in response to the notification received from the website crawler.

15. (Previously presented) The URL resolution system as claimed in claim 1 wherein the script URL resolution component outputs an execution result including the script URL when the execution of the script code is successful; and

the website crawler performs crawling of a web page identified by the script URL.

16. (Original) The URL resolution system as claimed in claim 1 wherein the script URL resolution component outputs an examination result including a failure result when the examination of the script code fails.

17. (Previously Presented) The URL resolution system as claimed in claim 1 wherein the URL resolution system comprises a presentation unit to present the examination result to a user.

18. (Original) The URL resolution system as claimed in claim 1 wherein the script URL resolution component is provided as a part of the URL resolution system.

19. (Previously Presented) The URL resolution system as claimed in claim 1 wherein the script URL resolution component is provided as a part of the website crawler.

20. (Previously Presented) The URL resolution system as claimed in claim 11 wherein the website crawler includes the web page examiner.

21. (Previously Presented) The URL resolution system as claimed in claim 1 wherein the website has one or more web pages, and the script URL resolution component is a script URL gatherer for locating each URL contained in any of the web pages associated with the website and causing examination of a web page identified by each URL during the crawling to resolve script code contained in the web page to obtain one or more script URLs created by the script code.

22. (Previously Presented) The URL resolution system as claimed in claim 21 comprising an advanced web page examiner having:

a web page loader for loading a web page identified by a URL received from the script URL gatherer; and

a script code examiner for examining the loaded web page to resolve any script URL that is created by script code in the loaded web page.

23. (Previously Presented) The URL resolution system as claimed in claim 21 wherein the script code examiner selects and executes specific portions of the script code found in the loaded web page used to dynamically create one or more script URLs, and returns said one or more script URLs to the script URL gatherer.

24. (Previously Presented) The URL resolution system as claimed in claim 22

wherein the advanced web page examiner is provided as a part of the URL resolution system.

25. (Previously Presented) The URL resolution system as claimed in claim 22 wherein the website crawler comprises a script code detector for detecting a web page that uses script code to create at least one script URL; and

the script URL gatherer sends to the advanced web page examiner a URL of the web page detected by the script code detector.

26. (Currently amended) A method for resolving Universal Resource Locators (URLs), the method comprising steps of:

crawling a website comprising one or more webpages;

locating script code used by web browsers to dynamically create one or more script URLs while crawling a website comprising one or more webpages; and selecting script code that possess one or more specific portions which are used by web browsers to dynamically create one or more script URLs;

loading said one or more web pages,

examining said one or more specific portions of the script code selected during the crawling which are used by web browsers to dynamically create one or more script URLs to obtain said one or more script URLs from the examination result by loading said one or more web pages, executing said specific portions of script code; and

executing the one or more selected portions of the script code to obtain said one or more script URLs; and

crawling one or more web pages identified by said one or more script URL
resolving the script URLs based on the execution.

27. (Previously Presented) The method as claimed in claim 26 wherein the locating

step selects one or more specific portions of said script code which creates one or more script URLs by examining said specific portions of script code found in the website.

28. (Cancelled)

29. (Previously Presented) The method as claimed in claim 26 wherein;

the step of locating script code comprises locating a web page that uses script code to dynamically create one or more script URLs, the script code having a specific portion that is used for the creation of said one or more script URLs; and

the step of examining specific portions of the script code comprises the

~~steps~~ step of: loading the located web page; and

~~executing the specific portion of the script code in the loaded web page to~~
~~resolve said one or more script URLs.~~

30. (Cancelled)

31. (Previously Presented) The method as claimed in claim 29 wherein the step of executing the specific portion of the script code comprises a step of instructing a web page examiner to execute the specific part of the script code.

32. (Currently Amended) The method as claimed in claim 29 comprising the additional step of ~~continuing~~ crawling of a web page identified by the script URL.

33. (Currently Amended) The method as claimed in claim 32 wherein the step of ~~continuing~~ crawling of a web page comprises a step of crawling the web page identified by the script URL immediately.

34. (Currently Amended) The method as claimed in claim 32 wherein the step of ~~continuing~~ crawling of a web page comprises a step of crawling the web page identified by the script URL in parallel to crawling of other web page.

35. (Currently Amended) The method as claimed in claim 32 wherein the step of ~~continuing~~ crawling of a web page comprises steps of

queuing the web page identified by the script URL; and
crawling the queued web page at a later time.

36. (Previously Presented) The method as claimed in claim 26 wherein the step of locating script code comprises steps of.

finding a URL in the web pages; and
examining a web page identified by the URL to locate script code in the web page
identified by the URL

37. (Previously Presented) The method as claimed in claim 36 comprising the additional step of selecting a web page that contains script code that is used to dynamically create one or more script URL, and wherein the examining step examines the selected web page.

38. (Previously Presented) The method as claimed in claim 26 comprising the additional steps of:

obtaining examination results including said one or more script URLs when the examination step is successful and a failure result when the examination step fails to obtain said one or more script URLs; and

presenting to a user the examination result including said one or more script URLs and/or the failure result.

39. (Currently amended) A computer readable medium storing the instructions and/or statements for use in the execution in a computer of a method for resolving Universal Resource Locators (URLs), the method comprising steps of:

crawling a website comprising one or more webpages;

~~locating script code while crawling a website comprising one or more web pages~~
and selecting script code that possesses one or more specific portions which are used by
web browsers to dynamically create one or more script URLs;

determining whether said script code possesses one or more specific portions
which are used by web browsers to dynamically create one or more script URLs; ~~and~~

examining said one or more specific portions of script code selected during the
crawling to obtain said one or more script URLs from the examination result by loading
said one or more webpages; ~~and executing said one or more portions of script code~~

executing the one or more selected portions of the script code to obtain said one or
more script URLs; and

resolving the script URLs based on the execution.

40. (Currently amended) Electronic signals for use in the execution in a computer of a
method for resolving Universal Resource Locators (URLs), the method comprising steps of:

crawling a website comprising one or more webpages;

~~locating script code while crawling a website comprising one or more web pages~~
and selecting script code that possesses one or more specific portions which are used by
web browsers to dynamically create one or more script URLs;

determining whether said script code possesses one or more specific portions
which are used by web browsers to dynamically create one or more script URLs; ~~and~~

loading said one or more webpages, and examining said one or more specific
portions of script code selected during the crawling to obtain said one or more script
URLs from the examination result by executing said one or more portions of script code;
and

resolving the script URLs based on the execution.

41. (Currently amended) A computer program product for use in the execution in a computer of a method for resolving Universal Resource Locators (URLs), the computer program product comprising:

a module for crawling a website comprising one or more webpages;

a module for locating and selecting script code which possesses one or more specific portions which are used by web browsers to dynamically create one or more script URLs ~~while crawling a website comprising one or more web pages;~~ and

a module for loading said webpages, and examining said one or more specific portions of script code selected during the crawling to obtain said one or more script URLs from the examination result by executing said one or more specific portions of script code; and

a module for resolving the script URLs based on the execution.

42. (Currently amended) A URL resolution system for resolving Universal Resource Locators (URLs), said URL resolution system comprising:

a website crawler ~~for crawling~~ operative to crawl a website comprising one or more web pages ~~and locating~~ locate script code within said website;

a script code detector ~~for specifically determining~~ operative to determine the presence of portions of said script code used by web browsers to dynamically create one or more script URLs; and

a script URL resolution component ~~for loading~~ operative to load said one or more webpages, and ~~examining~~ examine said portions of said script code used by web browsers to dynamically create said one or more script URLs to obtain said one or more script URLs by

identifying one or more script URLs from said portions of said script code and resolve the script URLs based on the execution.

43. (Previously Presented) The URL resolution system as claimed in claim 34 wherein script URL resolution component identifies said one or more script URLs by executing said portions of said script code used to dynamically create one or more script URLs.

44. (Currently amended) A method of testing the functionality of a website containing script URLs, said method comprising the following steps:

providing a URL resolution system comprising:

a website crawler ~~for crawling~~ operative to crawl a website comprising one or more web pages and ~~locating~~ locate script code within said website;

a script code detector ~~for specifically determining~~ operative to determine the presence of portions of said script code used by web browsers to dynamically create one or more script URLs; and

a script URL resolution component ~~for loading~~ operative to load said one or more web pages, and ~~examining~~ examine said specific portions of said script code used by web browsers to dynamically create said one or more script URLs to obtain said one or more script URLs by identifying one or more script URLs in the specific portion of said script code and resolve the script URLs based on the execution;

wherein said URL resolution component obtains said one or more script URLs and returns said one or more script URLs to said webcrawler;

wherein said web crawler crawls said website to test the integrity of each URL contained within said website including script URLs; and

wherein said URL resolution system comprises a presentation unit to report nonresolving or 'broken' URLs to a user.
